SKILLS SUMMARY

●●●● Software Development

●●●● Infrastructure Analysis

●●●○ Systems Administration

●●○○ Enterprise Resource Planning

●●●○ Staff and User Training

●●●● Process Improvement

personal profile

I have expertise in the cybersecurity field. In day-to-day work, I manage critical systems and help clients secure their Linux- and BSD-based infrastructure. I also have expertise in software engineering and systems administration.

work experience*

Infrastructure & Web Developer
MineRIP Network | Early 2021, November 2021 - Present

- Provision and manage infrastructure
- Create web-based applications for public and private use

Systems Administrator & Developer
Lights On Studios | September 2020 - October 2021(?)

- Managed logistics of project hosting
- Helped develop new features for projects
- Eventually assisted with leading the development team

Freelance & Open Source
Independent / Hydrabank | April 2021 - Present

- Plan solutions and advise security mitigations for clients
- Manage clients' infrastructure (on hire)
- Create websites and apps based on clients' needs
- Develop versatile open-source solutions for the general public

experience

Cybersecurity & Systems Administration

- Experience with various Linux distributions with heavily differing styles and targets (examples include RHEL/CentOS, Debian, and Ubuntu)
- Ability to analyze and create a threat score for potential vulnerabilities

Software Engineering & Web Development

- 6.5+ years of experience in various programming languages (JavaScript/TS, C#/.NET, Python, Rust)
- Lots of experience in frameworks like React, Tailwind, Rust, etc.
